

codePod v.1.0 is a podcast audience interaction system — built for the moment when listener attention is at its highest.

The digital handshake. Host and listener connect directly — codeNXT handles what happens in between ...

During or at the end of the podcast episode, a picture with an QR code or link invites the listener to scan or tap. Access and reward opens instantly.

But now access is dynamic.

The first listeners can unlock GOLD access.

The next group receives SILVER.

Remaining listeners receive GENERAL access.

Access depends on when you join.

Within the first 24 hours after release, listeners unlock exclusive bonus content — and you own the connection.

The same QR code or link can remain available indefinitely. Bonus access is activated for the first 24 hours after the episode is released. The dashboard, report, and CSV export remain available for 7 days after release. It becomes a real-time digital handshake between host and listener.

HOW IT WORKS — PODCAST

1. BEFORE RELEASE

*A unique Picture/QR with link and eventcode are generated for the episode.
The same QR code can be shown:*

- *in the podcast artwork*
- *in show notes*
- *in newsletters*
- *on social media*
- *on websites*

*Bonus allocation is configured in advance:
GOLD / SILVER / GENERAL.*

2. EPISODE GOES LIVE

Nothing changes for the listener.

No app.

No password.

No friction.

The system stays invisible until the end when the listener chooses to scan or tap.

3. THE MOMENT

As soon as the episode is published, the bonus window opens.

The first listeners receive GOLD access. The next group enters SILVER.

Remaining listeners receive GENERAL access.

4. SCAN OR TAP

The listener scans the QR code or taps the link.

No app.

No login.

No friction.

5. UNLOCK

Access opens instantly.

Different listener groups can receive different rewards:

- *bonus audio*
- *video*
- *PDF*
- *transcript*
- *coupon*
- *private link*
- *exclusive content*

Example:

The first listeners unlock a rare GOLD bonus available only to early responders.

6. AFTER

A direct connection is established. InSide.

For the first time, you know who listened — and they know you noticed.

InSide transforms anonymous listeners into a real, named audience — yours to reach directly, without algorithms in between.

Listener actions are captured:

- *scans*
- *joins*
- *allocation levels*
- *conversions*
- *engagement*

WHAT THIS ENABLES

- *Direct listener connection — no platforms or algorithms in between*
- *Real-time audience segmentation after release*
- *GOLD / SILVER / GENERAL reward allocation*
- *Measurable engagement, not estimates*
- *Live dashboard with real-time metrics*
- *CSV and PDF reporting*
- *Flexible rewards: audio, video, PDF, links, downloads*
- *Works with all podcast platforms*

FULL GDPR-INTEGRATION

Your data stays yours. codePod is fully GDPR-compliant — listener data is stored securely in Europe, never sold or shared with third parties, and every listener gives explicit consent before joining. You can export or delete your audience data at any time.

TYPICAL PILOT SETUP

- One podcast episode
- One QR code and shareable link
- 24-hour bonus activation window
- Tiered listener rewards
- Live dashboard
- Post-episode report

codePod vs. existing tools
